DETAILED ACTION

Response to Arguments

- 1. Applicant's arguments regarding claim 21 filed 05/03/2004 have been fully considered but they are not persuasive. Please see the following reasons and the grounds of rejection below.
- 2. Regarding claim 21, the applicant argues that the reference to Kangasharju et al. (1999) does not teach sending of catalogs. Further, they state the reference does not teach the storage of content object portions. First, the batch message sent by caches to location servers in Kangasharju et al. (1999) is the same as the sending of a catalog for updating. Nothing stated in the claim differentiates the catalog from the data sent in the reference. Also, Kangasharju et al. (1999) teaches the storage of content object portions in that one web site may have several different portions that can be stored in different caches.

Allowable Subject Matter

- 3. Claims 1-20 and 22-24 allowed.
- The following is a statement of reasons for the indication of allowable subject matter: None of the prior art of record teaches a system wherein a catalog of the data stored in a content exchange is returned only to the origin server from which the data was retrieved. Independent claims 1, 8, and 15 have all been amended to clearly state that the server from which the content object portions are retrieved is the same server to which the catalog information is sent. Prior art such as the reference to Kangasharju et al. (1999) teach means wherein

Art Unit: 2153

catalog data is sent to a single central server regardless of where the information was obtained. No information is sent back to the origin server in the prior art.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35U.S.C. 102 that form the basis for the rejections under this section made in thisOffice action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 6. Claim 21 is rejected under 35 U.S.C. 102(b) as being anticipated by Kangasharju et al. (1999).
- 7. Regarding claim 21, Kangasharju et al. (1999) teach a system for cataloging content object portions dispersed across a plurality of content exchanges comprising:
 - a. A first content exchange comprising a first content object portion, wherein the first content object portion comprises a first subset of a content object (abstract, lines 1-3, page 2, column 2, paragraph 3).
 - b. A second content exchange comprising a second content object portion, wherein the second content object portion comprises a second subset of the content object (abstract, lines 1-3, page 2, column 2, paragraph 3).
 - c. A remote server, wherein the remote server is communicably coupled to a first datalink and a second datalink, wherein the

Application/Control Ther: 09/664,147

Art Unit: 2153

first datalink transports a first catalog indicating the first content object portion, and wherein the second datalink transports a second catalog indicating the second content object portion (page 5, column 2, paragraph 4; page 6, column 1, paragraph 1).

d. Wherein the content object is either a content file or a content stream (abstract, lines 1-3; page 2, column 2, paragraph 3; page 5, column 2, paragraph 4; page 6, column 1, paragraph 1). Please note that content files are cached in different locations to form content objects.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kevin Parton whose telephone number is (703)306-0543. The examiner can normally be reached on M-F 8:00AM - 4:30PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Glenton Burgess can be reached on (703)305-4792. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
